## AO Spine Thoracolumbar Classification System

### Neurology

Neurology		
Туре	Neurological	
N0	Neurology intact	
N1	Transient neurologic deficit	
N2	Radicular symptoms	
N3	Incomplete spinal cord injury or any degree of cauda equina injury	
N4	Complete spinal cord injuryl	
NX	Cannot be examined	
+	Continued spinal cord compression	

### Modifiers

Туре	Description
M1	This modifier is used to designate fractures with an indeterminate injury to the tension band based on spinal imaging with or without MRI. This modifier is important for designating those injuries with stable injuries from a bony standpoint for which ligamentous insufficiency may help determine whether operative stabilization is a consideration.
М2	Is used to designate a patient-specific comorbidity, which might argue either for or against surgery for patients with relative surgical indications. Examples of an M2 modifier include ankylosing spondylitis or burns affecting the skin overlying the injured spine.
